

Question 1

A company wants to store employee information.

Create the following table.

Employee

Column Name	Data Type
EmployeeID	INT
EmployeeName	VARCHAR(100)
Department	VARCHAR(50)
Salary	INT
JoiningDate	DATE

Tasks

1. Create the table.
2. Make 'EmployeeID' the Primary Key.

Question 2

Consider the following table.

Student

StudentID	Name	Course	Marks
101	Rahul	Python	80
102	Priya	Java	75
103	Aman	Python	90
104	Neha	SQL	70

Write SQL queries to:

1. Display all student records.
2. Display only Name and Marks.
3. Display only the Course column.

Question 3

Consider the following table.

Product

ProductID	ProductName	Category	Price
1	Mouse	Electronics	800
2	Laptop	Electronics	65000
3	Chair	Furniture	4500
4	Keyboard	Electronics	1200

Write SQL queries to:

1. Display products costing more than ₹1000.
2. Display all Electronics products.
3. Display the Laptop record.

Question 4

Create the following table.

Customer

Column	Data Type
CustomerID	INT
CustomerName	VARCHAR(100)
City	VARCHAR(50)
Mobile	VARCHAR(15)

Tasks

1. Create the table.
2. Make CustomerID the Primary Key.
3. Explain why Primary Keys are important.

Question 5

Consider the following tables.

Employee

EmployeeID	Name	DepartmentID
1	Rahul	101
2	Priya	102
3	Aman	101

Department

DepartmentID	DepartmentName
101	IT
102	HR

Write an SQL query to display

- * Employee Name
- * Department Name

using an INNER JOIN.

Question 6

Consider the following tables.

Student

StudentID	Name	CourseID
1	Rahul	201
2	Neha	202
3	Aman	NULL

Course

CourseID	CourseName
201	Python
202	SQL

Write an SQL query to display all students along with their course names using a LEFT JOIN.

Question 7

Consider the following table.

Employee

EmployeeID	Name	Department	Salary
1	Rahul	IT	65000
2	Priya	HR	45000
3	Aman	IT	70000

Create a view named `HighSalaryEmployees` that displays employees earning more than ₹60,000.

Question 8

Consider the following table.

Orders

OrderID	CustomerName	OrderDate	Amount
1	John Doe	2023-10-27	15000
2	Jane Smith	2023-10-28	20000
3	Mike Johnson	2023-10-29	12000

Tasks

1. Create an index on OrderID.
2. Explain one benefit of creating an index.

Question 9

Consider the following table.

Book

BookID	BookName	Author	Price
1	Python Basics	John	500
2	Learning SQL	David	700

Write a stored procedure named 'GetBooks' that displays all records from the Book table.

Question 10

Consider the following tables.

Student

StudentID	Name	CourseID
1	Rahul	101
2	Neha	102
3	Aman	101

Course

CourseID	CourseName
101	Python
102	Java

Write SQL queries to:

1. Display Student Name and Course Name using an INNER JOIN.
2. Display only students enrolled in the Python course using the WHERE clause.
3. Create a view named 'PythonStudents' for students enrolled in the Python course.
